MANUTENZIONE E LAVAGGIO / MAINTENANCE AND CLEANING

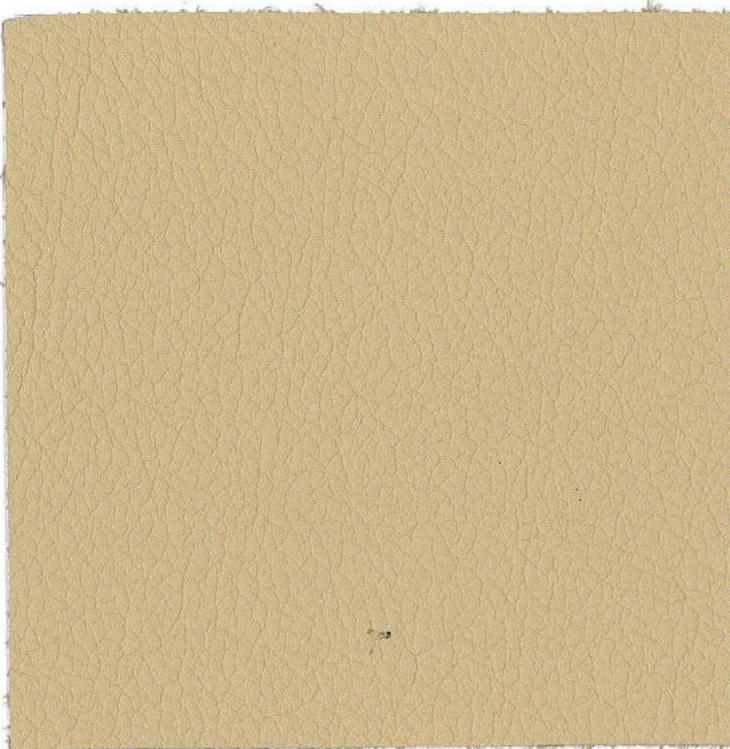

Manutenzione ordinaria: spolverare delicatamente e, in caso di macchie lievi, passare la superficie con un panno umido in microfibra o con una soluzione di detergente neutro, risciacquare successivamente con acqua. Lavaggio: in acqua a 30°C, a mano o a macchina senza centrifuga; non stirzare; lasciare asciugare al rovescio su superficie piana. Stirare dal lato del tessuto a bassa temperatura. Macchie localizzate e ostinate (olio, grasso, caffè, liquori, chewing-gum, ...): disciogliere tempestivamente la macchia con alcool etilico diluito in acqua al 20%, tamponare e trattare successivamente con una soluzione di detergente neutro; risciacquare bene.
Ordinary cleaning: dust gently; in case of light stains clean the surface using a microfiber damp cloth or a neutral detergent solution; rinse with water afterwards. Washing: in water at 30°C, by hand or washing machine. No spin-drying; no squeezing. Dry the fabric by leaving it unfolded on its reverse side. Iron to the reverse side at low temperature. For harder stains (oil, grease, coffee, chewing-gum, ...): dissolve the stain quickly by using alcohol diluted in water at 20%; tampon, clean with neutral detergent solution and then rinse again.

PULIZIA E MANUTENZIONE DELLA PELLE / CLEANING AND CARING FOR THE LEATHER

Per la normale pulizia spolverare periodicamente con un panno pulito, morbido e asciutto.

Eventuali macchie possono essere rimosse usando un panno pulito imbevuto di una soluzione d'acqua e sapone neutro bianco. Evitare di strofinare la superficie da trattare, ma tamponare, dall'esterno verso l'interno della macchia. Non asciugare la pelle alla luce del sole o con l'asciugacapelli. Utilizzare mai sostanze detergenti non consigliate in quanto possono danneggiare il rivestimento in pelle causando crepe o scolorimento. Per mantenere vivo il colore del rivestimento, evitare l'esposizione del manufatto in pelle alla luce diretta del sole.

For normal cleaning just dust the leather with a clean, soft dry cloth. Any stains can be removed using a damp cloth and mild white detergent. Do not rub the surface but dab it from the outside towards the inside of the stain. Do not dry the leather in the sunlight or with a hair dryer. Do not use detergents that are not specific for leather, as they can damage the surface causing it to crack or fade. To keep the colours bright, do not expose the leather to direct sunlight.

I prodotti chimici necessari alla produzione della pelle, utilizzati per la concia, la tintura e la rifinizione dei grezzi, non contengono sostanze nocive alla salute ed all'ambiente. Per motivi tecnici non è possibile garantire la stessa tonalità del colore tra una partita e l'altra.

The chemicals needed for the production of leather, used for the tanning, the dyeing and the finishing of the raw hides, do not contain substances which can be harmful for health or the environment. Due to technical reasons it is not possible to guarantee the same tonality of colour from one batch to another.

PER LA PELLE AVERE DEI DIFETTI È NATURALE / IT IS NATURAL FOR THE LEATHER TO HAVE DEFECTS

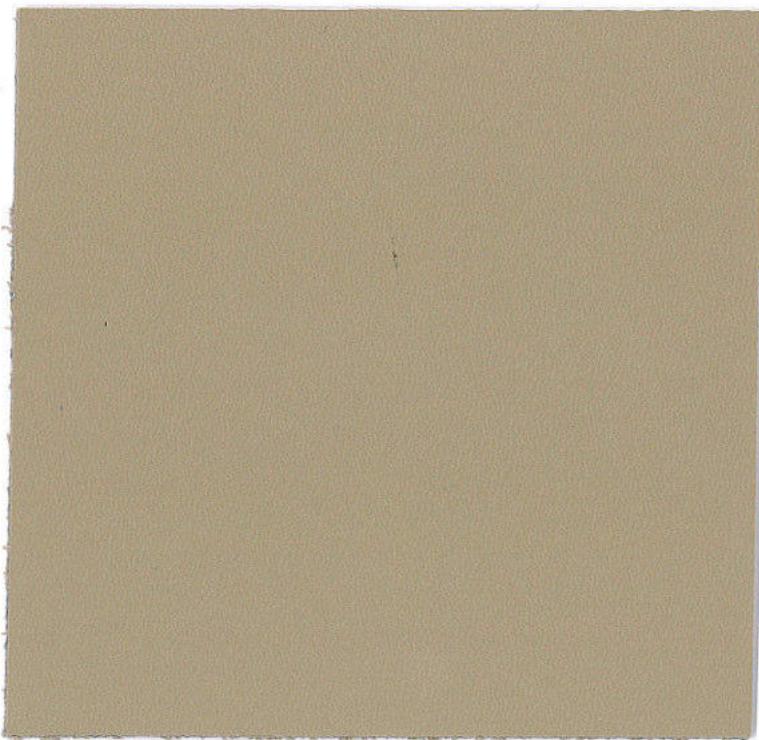

È importantissimo ricordare che quando si parla dei difetti della pelle, si parla di caratteristiche naturali. Caratteristiche che addirittura qualificano l'origine della pelle, fermo restando che non ne modifichino resistenza, durata e qualità. Bisogna cioè convincersi che gli elementi caratterizzanti della pelle non si potranno mai eliminare e che perciò non si deve ricorrere a lavorazioni troppo sofisticate che ottengono il solo risultato di ridurre la bontà intrinseca della pelle. Il fascino della pelle, la sua bellezza, sapranno ripagare ampiamente quanti saranno in grado di apprezzarla, amarla, rispettarla. Tutto qui, come la pelle non c'è che la pelle.

When we talk about the defects of leather, it is very important to emphasize that these natural characteristics, which prove the genuine origin of the leather, provided they do not alter resistance, durability and quality. We have therefore to convince ourselves that these particular peculiarities of the leather cannot be eliminated and it is useless to submit the leather to a sophisticated process which achieves the only result of affecting its intrinsic quality. The charm of the leather.
